home bleeding from his wounds and died. The people said that the jaguar had eaten the body and had returned only the *umé* for proper burial.

The shaman, whether *yavi* or *paridhokū*, chooses his calling. It does not choose him. There is nothing to suggest that the Cubeo shaman is an unstable personality in the way in which Siberian and many North American Indian shamans are. That is to say, among the Cubeo there is neither trance nor other form of "hysterical" behavior. The *yavi*, who cultivates the reputation of himself as a jaguar, is seemingly an aggressive antisocial type, in marked contrast to the favored Cubeo personality. I heard of only one woman who had become a shaman, and she was a transvestite who made such a nuisance of herself bothering women that the shamans who had prepared her stripped her of her powers. Any youth may become a shaman if he is accepted by the school of shamans, submits to the rigors of the novitiate, and passes an examination. As a young man he will not be a *yavi*. He becomes more malevolent and more dangerous with age. As an elder he finally acquires the power to appear as a jaguar.

The novitiate lasts from one month to five. None of my laymen informants could describe it in detail. The novitiate consists of four sections: abstinences, insertions of magical substances into the body, learning of songs and ritual, and examinations. The abstinences include sexual relations and the eating of fish, broiled game flesh, and, inexplicably, pineapple. One informant said that the novice, who is expected to become thin, lives on nothing but manioc and water.

The insertions described below are the actual sources of the shaman's power: (1) *duvaíyo*, spines, the center stems of the leaf of the *amhókūkū* tree, are softened and laid on the underside of the forearms until drawn in; (2) *hókiwe*, another spine, is inserted in the chest and in the palms of the hands; (3) *kenddox*, crystals of quartz, are inserted into the stomach; (4) *kwitóbo*, eagle feathers, are inserted up the nostrils to lodge in the head; (5) *dúpa*, the resin of the *amhókūkū* tree, is powdered and inhaled to lodge in the heart;[1] (6) *kúria*, another snuff made from the bark of the *kuridkū* tree, is inhaled and produces a narcotic effect. My notes are not clear on whether *kúria* remains permanently in the body or is taken only for the narcotic effect. The *duvaíyo*, the *hokiwe*, and the *kenddox* later serve the shaman as his own weapons to use against other shamans and to shoot into the body of a victim.

After the insertions have been made, the novice is taught songs

[1] Koch-Grünberg's information was that *dúpa* was a white stone, excrement of a great mythical eagle. However, I was given a piece of *dúpa* and it is a resin.

CUBEO

The river anaconda is angered at newborn children and at menstruating women but not at any particular child or woman. The anger of spirits is, finally, direct. Men are always suspected of conspiring, but nonhuman spirits never do.

Finally, Cubeo religion includes a concept of inanimate power, of power resident in substances, places, and personal states of being. I found no articulate Cubeo theory as to inanimate power. *Parúkü* is clearly personalized power and *parié* is limited in its applicability to objects intimately associated with the Ancients, the flutes and trumpets in particular. But clearly there is power in pigments, feathers, animal bones, plants, the toenail of the armadillo (which the medicine man uses to bring rain), human hair, leg ligatures, and a host of ceremonial objects. With respect to these substances it is clear that we are dealing with assorted beliefs and practices that are both old and widespread throughout the tropical forests of South America, not to mention beliefs that are close to universal.

Genipa (*wei*) is the most potent pigment. It is applied to the hands and feet as gloves and socks and is run coarsely down the back to create a deliberately crude covering rather than a design. The Cubeo are sensitive to neatly executed designs and normally take great pains with body painting, using special sticks as well as die rollers to stamp a design. The crudeness of genipa painting is to differentiate it from body decoration and to emphasize its purely magical character. Men do use genipa paint, but it is primarily a protective pigment for women and children. A menstruating woman will always coat her back with genipa as a safeguard against animal spirits. She will coat her hands with it when handling sacred substances such as coca and tobacco. Applied to infants, genipa wards off influences that might impede growth. Women say only that genipa is good for the skin, but this is typical evasiveness.

Red pigment (*monhá*) has more of a decorative function. It is applied by men and women with great care. Applied in spots it is jaguar magic to protect infants, and applied crudely it is a protection of sorts against the *yavi*.

It was never clear to me whether the love charm *pedídya*, a blossom worn in the hair, was intended to work by magic or merely by suggestion. The most effective love potions, carefully safeguarded by the women even against the prying anthropologist, are secret and magical.

Among ceremonial objects the *behórü* is a rattle lance some three meters long with a hollow chamber at the top in which pebbles have been placed. It can bring rain, one informant said, but it was not used by the Cubeo for that purpose.
